# Modelgeo program general 3D mathematics

The Modelgeo program is a general-purpose 3D mathematical software and a Rapid Application Development (RAD) tool. Excellent 3D display and analysis features makes it a natural choice for 3D property modelling in any discipline.

## Description

- General-purpose 3D mathematics program with internal TCL and QT based scripting language
- VTK based data model and high-quality graphics with support for many data types
- RAD tool suitable for quick development of simple and advanced applications

The program layout can be configured by the user
